

Image Analysis and OCR with Azure AI Vision

Introduction:

- ➔ Think of Azure ai as your personal assistant in digital world
- ➔ Azure AI Vision enables developers to add vision capabilities to their applications without needing to build and train AI models from scratch
- ➔ Azure AI Vision can automatically caption images and classify them in categories generate rich insights and even perform smart cropping
- ➔ It is imp as it saves time and enhances user experience
- ➔ Azure AI Vision's real-time video analytics acts like a vigilant security guard, using spatial analysis to track movement, count people, and understand behavior in physical spaces.
- ➔ **Azure AI Vision's OCR** (Optical Character Recognition) capabilities allow you to extract printed and handwritten text from images, even when dealing with mixed languages and diverse writing styles.
- ➔ It allows us to make images a searchable and readable

Demo : Image Analysis with Azure AI Vision

1. Create Azure AI Resource
2. Open Azure AI Studio → Search Azure AI Services

3. Create Azure AI Services:

Home > Azure AI services | Azure AI services >

Create Azure AI services

Basics Network Tags Review > create

Get access to Azure OpenAI, Speech, Vision, Language, and Translator Azure AI services with a single API key. Quickly connect services together to achieve more insights into your content and easily integrate with other services.

4. wait till deployment ends
5. redirect back to Azure AI studio
6. Overview → AI Services → vision + document
7. **Open Detect objects → select and upload image file**
8. It will be able to detect the element and object in the image

Demo : Real-Time Video Analytics with Azure AI Vision

1. Open AI services → search Azure Ai video indexer

2. Create a video indexer resource

Home > Azure AI Video Indexer >

Create a Video Indexer resource

manage all your resources.

Subscription *

Resource group *
[Create new](#)

Resource name *

Region *

Existing content ☐ Connect all content from an existing classic account

i All the videos, files, and data associated with the classic account will be referred to this new account.

Storage for allocated content *
[Create a new storage account](#)

Advanced AI features

☒ **Unlock generative AI:** Connect your Azure Video Indexer resource to Azure OpenAI for more capabilities. [Learn about the benefits of connecting to Azure OpenAI](#)

Azure OpenAI Resource

Managed identities
The managed identity will be used by the Video Indexer account to access Azure resources.

System-assigned ☒

User-assigned ☐

☒ I have all the rights to use the content/file, and agree that it will be handled per the [Online Services Terms](#) and the [Microsoft Privacy Statement](#).

[Review + create](#) [Previous](#) [Next: Tags >](#)

3. Then wait till it deploys
4. Then open actual portal Azure AI Studio
5. Upload a video from your system then file all the details about video as video analyser can check what people say and use it for generating transcript
6. Then the analyser will be the image and can generate transcript from the video

OCR with Azure AI Vision:

Open Vision_Document and open image analysis that is used for extracting text from image
